

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Claim 1 (Previously Presented): A fencing system, comprising:

a rail consisting of at least two metal wires ensheathed in a plastic web;

a slotted connector having a face plate with two slots formed within the face in a planar surface thereof, the connector including a substantially planar middle portion separating the two slots, the connector having a front side and a rear side and also having a post attachment end;

a free end of the rail being disposed in the slotted connector so that the rail runs from the front side of the connector through a first slot nearest the post attachment end, around the middle portion, and then back through the second slot; and

a post to which the slotted connector is attached using a fastener.

Claim 2 (Previously Presented): The fencing system of claim 1, wherein the slotted connector comprises return edges extending along opposing sides of the rigid member, the return edges extending perpendicularly from the face plate.

Claim 3 (Previously Presented): The fencing system of claim 1, wherein the slotted connector is attached to the post using a fastener which permits the connector to pivot about the fastener.

Claim 4 (Original): The fencing system of claim 3, wherein the faceplate further comprises a throughhole adapted to receive the fastener.

Claim 5 (Original): The fencing system of claim 1, wherein the fastener is a lag bolt.

Claim 6 (Original): The fencing system of claim 1, wherein the faceplate includes a bend between the first slot and the post attachment end.

Claim 7 (Original): The fencing system of claim 1, wherein the connector is made of steel.

Claim 8 (Original): The fencing system of claim 1, wherein the rail is rigid yet manually deformable.

Claim 9 (Original): The fencing system of claim 1, wherein the post is a wooden post with a circular cross section.

Claim 10 (Original): The fencing system of claim 1, further including a slotted joining connector having a face plate with a first slot, a second slot, and a third slot, the joining connector having a front side and a rear side.

Claim 11 (Original): The fencing system of claim 10, further comprising a second rail consisting of at least two metal wires ensheathed in a plastic web, with ends of the first and second rails being in abutting relationship to each other.

Claim 12 (Original): The fencing system of claim 11, wherein the first slot and the second slot are adapted to receive the abutting end of the first rail and the second slot and the third slot are adapted to receive the abutting end of the second rail.

Claims 13-20 (Cancelled)
